

Court Settings - Design

1. Court Selection, County Dropdown pulls the Primary Court ID from database or Flat File.

2. Court ID's Appear in the Location Table as well.

3. Name Data should be in any format the court prefers, however that format will appear as such on the forms.

4. Department and Room data is used on forms. These are string (varchar) data that could be in any format the court desires...again like #3 above the entry in the SETTINGS will match the printing on the FORMS.

The department can be Family Court, or Family Court Services, etc. The room is where the parties can meet to sign forms or discuss rulings.

5. Branch Officer and Court Reporter are the people they may need to locate in event of a dispute or misunderstanding.
